

# Circle

## Type E

## Plugwise

The Circle is a basic element of the Plugwise system. This plug is easily placed between the power socket and the plug of an appliance. The smart plug measures the energy consumption of the connected appliance and can switch it on and off. The plug sends the energy consumption data to the Plugwise software installed on your PC via a wireless MESH network. The software will process the data on energy consumption of the connected appliance resulting in clear overviews and graphs. From your computer you can switch the connected appliance on and off either manually or automatically, by means of switching schedules you can program yourself. The plug also has a standby killer function.

Dimensions: 81,3 x 72 x 43,5 mm  
 Voltage: 100-240 V~  
 Frequency: 50-60 Hz  
 Max. current: 16 A

Connector: CEE 7/7 (E&F hybrid)  
 Female connector: CEE 7/5  
*For Belgian/French plug system  
 with grounding pin*

***Be wise, plug in.***
